DECFREEDOM LAUNCHPAD

Token Standard & Tokenomics

Every coin created on DecFreedom is a standard BEP-20 that carries, in its own immutable contract, the guarantees a serious buyer checks first: a redeemable floor price, rug-proof locked liquidity and linear founder vesting. This document explains each function so you can share it with your community.

CORE MECHANISMS

1 Fixed supply

Standard BEP-20 (ERC-20 ABI), 18 decimals. The total supply is minted once at creation. There is no `mint`, no supply change and no admin key, ever.

2 Guaranteed floor price

On every sell, the chosen share (1 to 5%) is converted to BNB and held inside the token as a reserve. `floor = reserve / supply`. Any holder can redeem coins for their share of the reserve. The reserve only grows, so the floor can never fall.

3 Rug-proof locked liquidity

The pool lives inside the public Launchpad contract. There are no LP tokens to hold or dump. Liquidity is locked for the term chosen (6, 12, 24 months or forever) and can only be withdrawn by the creator after the date. Nobody can shorten it.

4 Founder vesting

The founder share (0 to 20% of supply) is released linearly over 3 to 24 months, on chain. There is no cliff, no early release and no admin override.

5 Anti-bot fair launch

For the first 24 hours after the pool opens, no wallet can buy more than 1% of the supply and buying plus selling in the same block is rejected. After that the guard switches off by itself; transfers are never restricted.

6 Ecosystem fee

0.5% of what a seller receives, in BNB or USDT, never in your token. It splits 0.20% + 0.20% to the two platform owners and 0.10% to DecFreedom staking. Buying and wallet-to-wallet transfers pay nothing.

OWNERSHIP & TRUST

You own 100% of your supply. The entire supply is minted to you, the creator. DecFreedom holds no share of your coin, now or ever, which leaves you in full control of what you do with it.

Verified & immutable. Every token is deployed from the same public, verified source, so its full code is public on BscScan. No proxy, no upgrade path, no pause, no blacklist, no transfer tax.

Non-custodial. DecFreedom never holds your funds or your coins and cannot reverse any transaction. The only privileged actions are the mechanisms above, bounded by the parameters set at creation.

DISTRIBUTION

Listed in the DecFreedom Swap by name, ticker or contract from the first block.

Public coin page with on-chain candles built from the pair's swap events, a live trade tape, and the reserve, lock and vesting state.

Embeddable swap widget (one iframe) that defaults to your pair. All volume routes through the same public pool, so every sale feeds your floor.

Important. Creating a coin does not give it value. Its price is only what other people are willing to pay, and most new coins lose their value. This document describes the DecFreedom token standard and the mechanisms the contract enforces; it is not financial advice and not a promise of

returns. Issuing a token may be regulated where you live, and complying is your responsibility.
